Categorical Homotopy Theory (New Mathematical Monographs) Emily Riehl

This book develops abstract homotopy theory from the categorical perspective with a particular focus on examples. Part I discusses two competing perspectives by which one typically first encounters homotopy (co)limits: either as derived functors definable when the appropriate diagram categories admit a compatible model structure, or through particular formulae that give the right notion in certain examples. Emily Riehl unifies these seemingly rival perspectives and demonstrates that model structures on diagram categories are irrelevant. Homotopy (co)limits are explained to be a special case of weighted (co)limits, a foundational topic in enriched category theory. In Part II, Riehl further examines this topic, separating categorical arguments from homotopical ones. Part III treats the most ubiquitous axiomatic framework for homotopy theory - Quillen's model categories. Here, Riehl simplifies familiar model categorical lemmas and definitions by focusing on weak factorization systems. Part IV introduces quasi-categories and homotopy coherence.

From reader reviews:

Christine Clute:

Hey guys, do you wish to find a new book to see? Maybe the book with the title Categorical Homotopy Theory (New Mathematical Monographs) suitable to you? Often the book was written by well known writer in this era. Typically the book entitled Categorical Homotopy Theory (New Mathematical Monographs) is a single of several books that everyone reads now. This kind of book was inspired a number of people in the world. When you read this publication you will enter the new shape that you never knew previous to. The author explained their plan in the simple way, consequently all of people can easily be aware of the core of this book. This book will give you a great deal of information about this world now. To help you to see the represented of the world in this particular book.

Edward Kirklin:

Spent a free time and energy to be fun activity to perform! A lot of people spent their sparetime with their family, or all their friends. Usually they accomplishing activity like watching television, planning to beach, or picnic in the park. They actually doing same task every week. Do you feel it? Will you something different to fill your own free time/ holiday? Maybe reading a book could be option to fill your free time/ holiday. The first thing that you will ask may be what kinds of guide that you should read. If you want to consider look for book, maybe the publication entitled Categorical Homotopy Theory (New Mathematical Monographs) can be great book to read. Maybe it can be best activity to you.

Renee Chagnon:

Reading a book to get new life style in this 12 months; every people loves to go through a book. When you read a book you can get a large amount of benefit. When you read textbooks, you can improve your knowledge, due to the fact book has a lot of information into it. The information that you will get depend on what forms of book that you have read. If you need to get information about your review, you can read education books, but if you want to entertain yourself you are able to a fiction books, these kinds of us novel, comics, and also soon. The Categorical Homotopy Theory (New Mathematical Monographs) will give you a new experience in examining a book.

Derrick Tompkins:

In this time globalization it is important to someone to obtain information. The information will make professionals understand the condition of the world. The health of the world makes the information much easier to share. You can find a lot of personal references to get information example: internet, newspapers, book, and soon. You can view that now, a lot of publisher which print many kinds of book. Typically the book that recommended for your requirements is Categorical Homotopy Theory (New Mathematical Monographs) this guide consist a lot of the information of the condition of this world now. This particular book was represented how does the world has grown up. The vocabulary styles that writer use to explain it is

easy to understand. The actual writer made some analysis when he makes this book. That's why this book suited all of you.
