Survival Analysis Using S: Analysis of Time-to-Event Data (Chapman & Hall/CRC Texts in Statistical Science) Mara Tableman, Jong Sung Kim

Survival Analysis Using S: Analysis of Time-to-Event Data is designed as a text for a one-semester or one-quarter course in survival analysis for upper-level or graduate students in statistics, biostatistics, and epidemiology. Prerequisites are a standard pre-calculus first course in probability and statistics, and a course in applied linear regression models. No prior knowledge of S or R is assumed. A wide choice of exercises is included, some intended for more advanced students with a first course in mathematical statistics.

The authors emphasize parametric log-linear models, while also detailing nonparametric procedures along with model building and data diagnostics. Medical and public health researchers will find the discussion of cut point analysis with bootstrap validation, competing risks and the cumulative incidence estimator, and the analysis of left-truncated and right-censored data invaluable. The bootstrap procedure checks robustness of cut point analysis and determines cut point(s).

In a chapter written by Stephen Portnoy, censored regression quantiles - a new nonparametric regression methodology (2003) - is developed to identify important forms of population heterogeneity and to detect departures from traditional Cox models. By generalizing the Kaplan-Meier estimator to regression models for conditional quantiles, this methods provides a valuable complement to traditional Cox proportional hazards approaches.

From reader reviews:

James Ellis:

Why don't make it to become your habit? Right now, try to ready your time to do the important work, like looking for your favorite publication and reading a e-book. Beside you can solve your problem; you can add your knowledge by the reserve entitled Survival Analysis Using S: Analysis of Time-to-Event Data (Chapman & Hall/CRC Texts in Statistical Science). Try to stumble through book Survival Analysis Using S: Analysis of Time-to-Event Data (Chapman & Hall/CRC Texts in Statistical Science) as your good friend. It means that it can to be your friend when you sense alone and beside regarding course make you smarter than previously. Yeah, it is very fortunated for yourself. The book makes you considerably more confidence because you can know almost everything by the book. So , we should make new experience along with knowledge with this book.

Diana Rush:

What do you think of book? It is just for students because they are still students or this for all people in the world, what best subject for that? Just simply you can be answered for that query above. Every person has different personality and hobby for every other. Don't to be compelled someone or something that they don't want do that. You must know how great in addition to important the book Survival Analysis Using S: Analysis of Time-to-Event Data (Chapman & Hall/CRC Texts in Statistical Science). All type of book is it possible to see on many methods. You can look for the internet resources or other social media.

Perry Payne:

The book untitled Survival Analysis Using S: Analysis of Time-to-Event Data (Chapman & Hall/CRC Texts in Statistical Science) contain a lot of information on that. The writer explains your girlfriend idea with easy method. The language is very simple to implement all the people, so do certainly not worry, you can easy to read the item. The book was compiled by famous author. The author brings you in the new period of time of literary works. It is possible to read this book because you can read more your smart phone, or gadget, so you can read the book within anywhere and anytime. If you want to buy the e-book, you can start their official web-site and order it. Have a nice go through.

Cecil Hardin:

Many people spending their time period by playing outside along with friends, fun activity with family or just watching TV the whole day. You can have new activity to enjoy your whole day by looking at a book. Ugh, ya think reading a book can really hard because you have to take the book everywhere? It fine you can have the e-book, getting everywhere you want in your Touch screen phone. Like Survival Analysis Using S: Analysis of Time-to-Event Data (Chapman & Hall/CRC Texts in Statistical Science) which is getting the e-book version. So , why not try out this book? Let's observe.
