## **Cutting and Packing in Production and Distribution: A Typology and Bibliography (Contributions to Management Science)** Harald Dyckhoff, Ute Finke

Within such disciplines as Management Science, Information and Computer Sciences, Engineering, Mathematics and Operations Research, problems of cutting and packing (C&P) of concrete or abstract objects appear under various specifications although they have essentially the same logical structure. This book tries to give a description and categorization of C&P-problems as a whole, making them comparable in such a way as to clearly mark their similarities and differences with respect to the underlying planning problems. The purpose is to create a basis of knowledge which presents suggestions for selection, development and utilization of appropriate solution approaches.

For this purpose the book

- creates a consistent terminology for C&P problems,
- develops an appropriate characterization scheme of 34 properties, and
- typifies more than 300 real C&P-problems published in the German and English literature.

Moreover, the book contains a collection of nearly 700 German and English references on C&P-problems.
