Chapter 055, Formulary (American College of Laboratory Animal Medicine) Mark Suckow

NOTE: This is a single chapter excerpted from the book *The Laboratory Rabbit, Guinea Pig, Hamster, and Other Rodents*, made available for individual purchase. Additional chapters, as well as the entire book, may be purchased separately.

This chapter develops a formulary that includes drugs in common use within the laboratory animal community. This formulary is limited to the species relevant to this volume, with particular emphasis on rabbits, guinea pigs, hamsters, and degus. There are many other excellent published sources that cover laboratory animals and other exotic species. This formulary is divided into five major areas within each species. These areas include analgesics/sedatives anesthetics, antiinfectives, parasiticides, and a miscellaneous category. It is also important to note that few of the drugs have undergone formal studies to determine their efficacy, pharmacokinetics, or pharmacodynamics. Most drug dosages listed in this formulary are based on clinical observation and experience, or extrapolated from limited scientific data. Extrapolation to other species may be considered using allometric scaling. Before any of the referenced doses are used in animals, it is the responsibility of the reader to study the source citation to understand how the listed dose was determined.
