A Course in Topological Combinatorics (Universitext) Mark de Longueville

A Course in Topological Combinatorics is the first undergraduate textbook on the field of topological combinatorics, a subject that has become an active and innovative research area in mathematics over the last thirty years with growing applications in math, computer science, and other applied areas. Topological combinatorics is concerned with solutions to combinatorial problems by applying topological tools. In most cases these solutions are very elegant and the connection between combinatorics and topology often arises as an unexpected surprise.

The textbook covers topics such as fair division, graph coloring problems, evasiveness of graph properties, and embedding problems from discrete geometry. The text contains a large number of figures that support the understanding of concepts and proofs. In many cases several alternative proofs for the same result are given, and each chapter ends with a series of exercises. The extensive appendix makes the book completely self-contained.

The textbook is well suited for advanced undergraduate or beginning graduate mathematics students. Previous knowledge in topology or graph theory is helpful but not necessary. The text may be used as a basis for a one- or two-semester course as well as a supplementary text for a topology or combinatorics class.

From reader reviews:

Genoveva Johnson:

Nowadays reading books are more than want or need but also turn into a life style. This reading habit give you lot of advantages. The huge benefits you got of course the knowledge the actual information inside the book that will improve your knowledge and information. The knowledge you get based on what kind of reserve you read, if you want get more knowledge just go with knowledge books but if you want feel happy read one together with theme for entertaining such as comic or novel. The actual A Course in Topological Combinatorics (Universitext) is kind of reserve which is giving the reader erratic experience.

Samuel Travis:

Precisely why? Because this A Course in Topological Combinatorics (Universitext) is an unordinary book that the inside of the guide waiting for you to snap this but latter it will distress you with the secret the idea inside. Reading this book beside it was fantastic author who also write the book in such remarkable way makes the content within easier to understand, entertaining technique but still convey the meaning completely. So , it is good for you for not hesitating having this ever again or you going to regret it. This unique book will give you a lot of positive aspects than the other book have such as help improving your talent and your critical thinking technique. So , still want to hesitate having that book? If I were you I will go to the guide store hurriedly.

Beverly Sands:

A Course in Topological Combinatorics (Universitext) can be one of your beginner books that are good idea. We recommend that straight away because this e-book has good vocabulary that could increase your knowledge in language, easy to understand, bit entertaining but delivering the information. The writer giving his/her effort to get every word into satisfaction arrangement in writing A Course in Topological Combinatorics (Universitext) but doesn't forget the main level, giving the reader the hottest and based confirm resource facts that maybe you can be considered one of it. This great information can certainly drawn you into completely new stage of crucial pondering.

Felicia Sharpton:

Is it an individual who having spare time and then spend it whole day by watching television programs or just lying down on the bed? Do you need something totally new? This A Course in Topological Combinatorics (Universitext) can be the solution, oh how comes? A fresh book you know. You are consequently out of date, spending your time by reading in this fresh era is common not a nerd activity. So what these textbooks have than the others?
